

## Differential Wheel Bead Seat Probes

Used Primarily for wide scanning of bead seat area of aircraft wheels. Features include a close tolerance molding to wheel profile, eliminating effects of lift-off. Standard frequency is 500KHz. Probe coils are bridge/differential that are run in reflection mode.

**\$490.00 Each**

### Connector Type (specify when ordering)

- Dual Microdot (standard)
- Available with tri-axial LEMO Connector (add L to PN)

### Frequency Range

- Medium Frequency 170KHz – 300KHz
