Coating thickness measurement

MiniTest 2500/4500

Classic Design

- All functions directly accessible
- Large selection of interchangeable sensors
- High-contrast display and illuminated keypad
- Memory and Statistics
- Bluetooth and USB Output
- IP 65 Rated Rugged housing

MiniTest 2500/4500

All-rounders for quality assurance

	Height: 91, Ø 19 mm	Height: 194, Ø 10,9 mm	Height: 79, Ø 16 mm	Height: 91, Ø 19 mm
Type of sensor	FN 1.6	FN 1.6/90	F 05	F 3
Application: Technical Data	Non-magnetic coatings on steel and insulating coatings on non-ferrous metal. The multi-talent for standard applications. Also available as version F 1.6 only for measuring on magnetic substrate or version N 1.6 only for measuring on non-ferrous metals.	Non-magnetic coatings on steel and insulating coatings on non-ferrous metal. Especially appropriate for measurements in tubes and pipes or objects which are difficult to access. Also available as version F 1.6/90 only for measuring on magnetic substrate or version N 1.6/90 only for measuring on non-ferrous metals.	Extremely thin non-ferrous met- al, oxide or paint coatings on small steel objects. Highest precision for thin coat- ings.	Non-magnetic coatings on steel, thick paint and enamel coatings. A true classic of coating thickness measurement.

asuring tasks

MiniTest 2500/4500

Application

The portable coating thickness gauges MiniTest 2500 and MiniTest 4500 measure non-destructively using either magnetic induction or the eddy current principle. The gauges are useful for a wide range of applications where high precision coating thickness measurement is required including; industrial corrosion protection, decorative coatings in design sector or daily use by:

- Manufacturers and end-users of all types of coated products
- Auditors and inspectors
- Electroplating and paint shops
- Chemical industry
- Automotive production, ship building, aviation, plant and mechanical engineering

MiniTest coating thickness gauges are not only useful in the laboratory but are equally qualified for use in industrial applications thanks to their rugged housing with a IP 65 rating. Both models feature USB output for connection to notebooks and PCs. The MiniTest 4500 additionally

offers a Bluetooth output for wireless data transfer to mobile devices like Smartphones and printers directly on site. All gauge functions can be triggered directly pressing a single key of the illuminated keypad. The large display with background illumination adds to a high level of user comfort and ergonomics. A broad selection of measuring sensors is available for the MiniTest 2500/4500 line of coating thickness gauges allowing it to handle standard applications as well more complex measuring tasks. The scope of application is determined by the sensor connected to the gauge:

F-type sensors work according to the magnetic induction principle and can measure non-magnetic coatings such as paint, enamel, rubber, aluminum, chrome, copper, zinc etc applied on iron and steel (including steel alloys and hardened magnetic steels).

ceramics etc. applied on all non-ferrous metals (for example aluminum, copper, zinc die cast, brass etc.) including austenitic steels.

FN-type sensors combine both principles and identify the substrate underneath the coating thus automatically switching to the correct measuring principle to measure on base material steel or non-ferrous metal.

Standard supply

Gauge:

- MiniTest 2500 or 4500
- Plastic transport case
- Rubber protection case
- Manual german, english, french
- 3 x AA battery
- USB connection cable

Sensor:

- Coating thickness sensor at choice
- Set of calibration standards including calibration foils and zero standard

Accessories

- Manufacturers certificate (DIN 55350 M) for coating thickness gauge, sensor and calibration standards
- External trigger option for transfer of readings to the memory
- Precision support for serial measuremeasurement and measurement of small objects
- Quick charger for NiMH rechargeable batteries
