LP-5C, Low Profile Permanent Magnet Yoke

Western Continues to listen to our Customer's, to develop more effective Portable MPI Equipment. An International Inspection company convinced us to offer a Low Profile Cable Type Permanent Magnet Yoke, for confined and complex workpieces. Most of their requests have been addressed by our new LP-5C.

This Cable Type Low Profile Yoke lifts over 50 Pounds, weighs only 490g (21oz.), but is only 8cm (3 1/4") high. The flux flow cable still allows excessive displacement of the Pole Pieces for complex geometries, which ensures the inspector can keep the surface spacing of under 6" (15cm), required by all reference specifications.

Come to Western Instruments, or one of our numerous Distributors, to put forward your wish list of unique requirements to make you inspections more reliable and faster.
