

What is AcuScreen?

AcuScreenNDT Software is intended to be used at NDT companies that make up their daily agendas around inspection results. The system is a hardware-software package that stores, processes and provides tools for viewing RT images acquired from digital and analog industrial equipment. AcuScreen is built on the client-server architecture, where inspectors' workstations represent clients, and one or more powerful computers function as the server responsible for safe data storage, with round-the-clock access.

AcuScreen Advantages

- High quality image presentation meets the toughest inspection demands.
- Advanced image analysis for third-level NDT inspectors.
- Connectivity with a great variety of equipment (video output of any standard, DR panels, film scanners, etc.).
- User-friendly and easily modifiable and expandable; addresses environment-specific user requirements.
- Functional flexibility.
- Unbeatable price/functionality ratio.

Hardware Requirements

Component	Minimum	Recommended
Processor	Intel i3	Intel i5/7
Memory	4 GB	16 GB
Free disk space	100 GB	2TB
