DENSORAPID D handheld Densitometer

For precise determination of optical density of X-Ray films, DENSORAPID D is equipped with an absolute innovative digital measuring technique. The illuminated display allows easy reading even in darkened rooms and the calibration process is highly simplified by the sophisticated software.

Fault-free measurements even in slightly inclined positions are guaranteed by the ergonomic hand probe with a soft tip avoiding scratches on the film.

The battery is charged with a standard USB charger and ensures an operating time of up to 30 hours.

Specification:

Range:	D 0.00 ... > 5.00
Accuracy:	+/- 0.05
Aperture Size:	0.075" (1.9 mm)

Scope of supply:

DENSORAPID D in transport case complete with USB charger,
KOWOSTEP D density step wedge, calibration certificate
