

EDDYCON portable eddy-current flaw detectors are flagships of our ECT instruments family. They combine the best features of earlier predecessors, being furnished with large displays and functional buttons for immediate access to any menu of the instrument, which would meet requirements of the most demanding user.

PURPOSE

EDDYCON eddy-current flaw detectors are intended for:

- detection of surface cracks in various parts;
- finding of cracks in holes and multi-layered structures;
- recognition of sub-surface flaws in non-magnetic conductive materials;
- evaluation of non-magnetic material conductivity, and paint coating thickness.

INDUSTRIAL APPLICATIONS

AEROSPACE

testing of aircraft engineering parts (wheel disks, skin, turbine blades, multi-layered struc-tures, various holes, etc.);

RAILWAY

examination of railway parts and car units (wheelsets and axle boxes; bogies of freight, refrigerator and passenger cars, automatic coupler, etc.);

OIL & GAS

inspection of pipelines, turbine blades of gas-distributing stations, pressure vessels, etc.;

CHEMICAL

examination of pipelines, industrial tanks, etc.;

non-destructive testing of steam generator tubes and headers by internal encircling probes, etc.;

HEAVY MACHINERY

quality control of bars, wire, steel structures, mill rollers, plates, etc.

BENEFITS OF EDDYCON

- tune-out from the influence of working gap and inhomogeneity of electromagnetic properties of test object;
- saving of huge number of settings and test results to the flaw detector memory; • quick-release Li-lon battery for
- two-way data communication with PC via Ethernet port;
- specialty software for viewing test results and printing out test reports;
- application-dependent software for real-time data displaying on a PC;

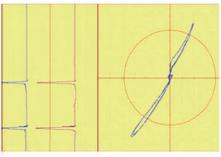

- software upgrade using USB flash drives:
- evaluation of conditional length and depth of the flaws:
- continuous 7-hour operation;
- light and sound alarms;
- easy-to-operate due to user-friendly intuitive interface;
- light weight and small size;
- conformity to ISO 15548-1.

DISTINCTIVE FEATURES OF EDDYCON

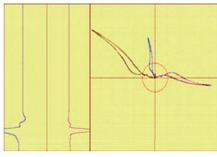

- high-contrast TFT color display;
- ALARM system: 4 three-color LED lights, sound indicator;
- dual-frequency operating mode;
- evaluation of material conductivity and paint coating thickness;
- simplified calibration of the instrument on reference standards; • USB-friendly.
- possibility to connect an encoder and rotary eddy-current scanner;
- · quick measurement of signal/noise ratio;
- compatibility with probes and rotary scanners of various makes and types;

- detection of flaws with the depth from
 digital signal filtering (4 types) 0.05 mm and width from 0.002 mm;
- frequency _ _ _ 10 Hz to 16 MHz;
- pulser output voltage (dual amplitude) ___ 0.5 V to 6 V;
- adjustable gain _____ 70 dB;
- additional gain _____ 30 dB;
- independent horizontal and vertical gain - 30 dB to 30 dB;
- signal phase change (signal rotation) range is from 0° to 360° with a step of 0.1°, 1°, 10°);
- sampling frequency _ up to 11 kHz;

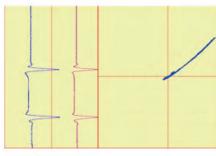

- of filters: Low-pass, High-pass, Bandpass, Averaging);
- eddy-current signal representation:
- a) complex plane enables to distinguish defects against noise by analyzing the signal shape;
- b) mixing-up of two channels can help suppress the disturbances and reduce their impact on test results (for combining, an operator can select one of 4 algorithms: summation, subtraction, summation with horizontal inversion, summation with vertical inversion);

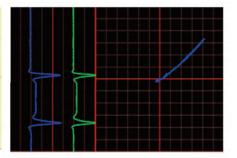

- a) complex plane
- possibility to move the center of complex plane to any visible part of the screen
 - top left -
 - top center
 - top right -
 - center left
 - center -
 - center right

- b) mix of two channels
- bottom left -
- bottom center
- bottom right -
- manual positioning of the center of complex plane into any screen sector -
- two lighting modes: 'Day' for dark rooms with poor lighting; 'Night' - for intensely illuminated rooms to improve the display legibility;

a) 'Night' mode

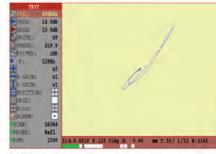

b) 'Day' mode

different modes of information display on the flaw detector's screen:

a) Menu+XY+A(t)

b) Menu+XY

c) Menu+A(t)

d) XY+A(t)

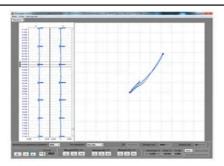

e) XY

f) A(t)

- time for the flaw detector's opera- absolute transformer ECP; tion mode setup: up to 1 minute;
- automatic display clearing (clearing time can be adjusted by 0.1 s; 0.5 s; 1 s; 2 s; 3 s; 4 s; 5 s; 8 s;)
- built-in timer and calendar;
- display backlight and brightness control;
- receiver overload control;
- battery discharge control;
- possibility to connect probes of the _ instrument is powered by a quickrelease following types:
- differential ECP;
- differential bridge-type ECP;
- ground center;
- differential transformer ECP;
- absolute single ECP;

- possibility to connect specialty rotary ET-scanners for inspection of holes;
- user-friendly multilingual interface;
- time of continuous operation of the flaw detector with fully charged storage battery: no less than 7 hours;
- total average service life of the flaw detector: no less than 10 years;
- Li-lon battery with rated voltage of 12 V and rated capacity of 4500 mA hour;
- operating temperature: -20 °C to +45 °C;
- differential transformer ECP with weight of the flaw detector with the battery: 0.9 kg;
 - overall dimensions of the flaw detector: 230 x 135 x 98 (mm.)

Specialized application-dependent software of Eddycon multipurpose eddy current flaw detector serves for processing test results, followed by generating and printing out test reports. The software program allows working with the saved data on PC.

- **Basic advantages:** Intuitive user-friendly interface;
 - Easy viewing of test results for each frequency mode (Frequency Nº1, Frquency Nº2 & Mix);
 - Generation and storage of electronic reports;
 - Data output for each detected flaw, such as:
 - -flaw location coordinate on a defectogram;
 - -signal amplitude and phase;
 - -flaw depth.

The resulting electronic report contains

all basic data on the test performed, such as:

- -name of company, NDT department and inspector who performed the test;
- -description of test object;
- -all setting parameters of the instrument at the time of inspection;
- -parameters of signals coming from defects (amplitude, phase, depth);
- -representation of the signals from defects in a complex plane or strip chart;
- -date of inspection;
- -possibility to create reports of other types, as required by customer.

DEVICE SPECIFICATION
