Peltec X-Stand is designed for use in a vault, factory or tarmac. It is compatible with all Lorad LPX and SPX systems, including water-cooled and air-cooled models. It features a power positioning control that allows the end-user to adjust the tube height to a desired position, from a maximum of 125" FOD down to 30" off the floor.

The tube holder also has the capability to rotate the tube 180 degrees for angle shots. The tube can be rotated for vertical or horizontal shots.

The X-Stand has a four 8" independent locking wheel system. The stand can be easily moved in all directions using the comfort grip bar.

The Peltec X-Stand uses a 12 VDC rechargeable battery package that makes the X- Stand truly portable. The unit includes a smart built-in battery charger that can be plugged into any standard 110 – 120 VAC.
